CFAST

Based in London, VMEDIA's CFast memory card hire offers the fastest memory cards for faster recording performance. The CFast 2.0 uses the SATA 3.0 interface which is theoretically capable of 600MB/s bus speeds. CFast 2.0 are not compatible with the older CompactFlash system due to the redesigned connector. CFast 2.0 was an evolution of CFast 1.0 which used the SATA 2.0 interface. At VMEDIA our CFast card hire boasts industry leading transfer speeds for maximum workflow efficiency. CFast 2.0 Memory cards are currently supported by the ARRI AMIRA, ARRI ALEXA Mini, Canon C300 Mk II, C700, XC10, 1D X mk II, and the C200, as well as the Blackmagic URSA Mini Pro 4.6K, URSA Mini 4.6K, URSA Mini 4K and URSA cameras. VMEDIA currently hire out 128GB SanDisk cards as well as Lexar and Sandisk 256GB sized CFast memory cards.

CFEXPRESS

Cupertino, California, September 7, 2016 - The CompactFlash Association announces the CFexpress Family of high-performance removable storage based on PCIe and NVMe Express. CFexpress leverages the PCIe physical interface for higher performance. CFA's objective is to specify multiple removable storage devices that spans from two lanes architecture all the way up to eight lanes. With the current PCIe Gen 3 delivering maximum theoretical interface speeds of 1.0GB/sec per lane, CFexpress would enable theoretical sequential speed of up to 8GB/s. CFexpress also utilizes the low latency NVMe Express memory/storage protocol across all of the form factors. This enables compatibility with a broader set of ecosystems.

Professional video data rate requirements are growing at an exponential rate exceeding the capabilities of existing open standard formats. 4K RAW video at 30fps requires 400-500MB/sec of sustained performance not including any overhead to guarantee performance over the entire recording media. 4K RAW video at 120fps requires 1,600-2,000MB/sec. 4K RAW video at 240fps requires 3,200-4,000MB/sec. Even in High-Quality I-Frame compression formats, the data rates quickly exceed 1.0GB/Sec at high frame rates.

2TB 960GB CFEXPRESS TYPE B MEMORY CARD FOR SONY BURANO

Sony 2TB 1920GB CFexpress Type B Memory Card for Sony BURANO Memory Card hire in London. The new Sony BURANO camera can film at extremely high resolutions such as 8K and 6K, and thanks to the robust architecture of the latest CEB-G1920T...

CODEX

April 12th 2012, during a press release, CODEX announced the CODEX Onboard S Recorder that utilises the then latest in Solid State Drive technology. This would then be presented to the world at NAB in Las Vegas. With the first iteration of the Compact Drive storage solution, CODEX would go on to evolve this system into the XR Capture drive, the SXR Capture drive and the ARRI ALEXA Mini LF's latest ARRI Compact Drive of today. Like its predecessors, the Compact Drive is designed to support the challenging demands of creative professionals and is backed by Codex world-class support while utilising the latest PCIe-based flash to deliver unrivaled performance for professional applications and feeds seamlessly into Codex's industry-standard workflows.

SXS

NAB, Las Vegas, April 15th 2007, SanDisk and Sony announce a collaboration with the intention of creating a new memory card specification, the SxS card. SxS memory cards use flash memory and comply with the ExpressCard form factor. At the time of their conception, ExpressCards were being rapidly adopted by PC manufacturers to replace the legacy PC Card form factor, giving the SxS memory cards broad support in post-production hardware. Sony adopted this high-speed SxS memory card specification in its XDCAM EX series professional camcorders. VMEDIA who are based in London, can provide you with a wide selection of SxS cards for hire. We supply SxS-1, SxS Pro and SxS Pro+ in sizes 32GB, 64GB, 128GB and soon to be 256GB. Our SxS memory card hire contributes to an efficient 4K workflow. SxS cards are currently supported by the ARRI ALEXA Classic, ARRI ALEXA XT, ARRI ALEXA SXT, the Sony PMW-F55, Sony PMW-F5 and various XDCAM series Camcorders.

240GB SXS PRO X MEMORY CARD

XQD

VMEDIAs XQD memory card hire in London offers stable high frame 4K video recording while avoiding speed degradation. The XQD 1.0 released in 2011 utilises the PCI Express interface and was capable of 2.5Gb/s. The XQD 2.0 was introduced in 2012 and boasted speeds of 8Gb/s using the PCI Express 3.0 interface, with legacy support for Gen 1 and Gen 2 PCI. XQD memory cards were created in partnership by Sony, SanDisk and Nikon and were quickly adopted by the Compact Flash Association. VMEDIAs XQD card hire maximises workflow efficiency with blistering transfer speeds. The XQD memory card are currently supported by the Sony PMW-F55, PMW-F5, PXW-FS7 Mk I and PXW-FS7 Mk II, as well as the Nikon D4, D4s, Nikon D5 and Nikon D500. VMEDIA currently hire out Sony 128GB and 256GB sized XQD memory cards.

CF

October 1994, SanDisk (formally SunDisk) announces the CompactFlash card. CompactFlash is a very small removable mass storage device designed with flash technology, a non-volatile storage solution that does not require a battery to retain data indefinitely. CompactFlash storage products are solid state, meaning they contain no moving parts, and provide users with much greater protection of their data than conventional magnetic disk drives. They are five to ten times more rugged and reliable than disk drives and consume only five percent of the power required by small disk drives. In 1995, eleven major companies, including Hewlett-Packard, Apple Computer, SanDisk (formerly SunDisk), formed the CompactFlash Association (CFA), an organization aimed at promoting the adoption of the CompactFlash storage specification as a new storage standard. VMEDIA who are based in London are able to supply the 128GB 160Mb/s CompactFlash CF memory cards which deliver first-rate read/write speeds to catch fast action shots and enable quick file transfers. Our CF card hire contributes to an efficient workflow and are currently supported by the Canon C300, Canon 1D X Mk II, Canon C500, Canon 5D Mk III, Canon 5D Mk IV, Canon 7D Mk II, Canon 80D, Nikon D5, Nikon D4/D4s, Nikon D500, Nikon D750 and Nikon D810.

SSDS

VMEDIA's SSD hire in London offers a more durable and low power storage solution to their spinning disk Hard Disk drive counterpart. The basis of the modern day SSD's flash memory was invented by Fujio Masuoka in 1980 while working for Toshiba. By 1989, after seeing the potential, SanDisk (then SunDisk) filed a patent for flash memory based SSD's. As of 2019 SSD's can reach staggering capacities of 100Tb and blistering transfer speeds of 3500MB/s. VMEDIA's SSD card hire in London maximises workflow efficiency by providing our clients with a wide range of Solid State Media to use with various recording devices in the film industry today.

POWER & BATTERIES

In October of 2018 VMEDIA expanded its rental range to include various power options including batteries, chargers and related accessories. With a dedicated power rental division, we are able to provide clients with all the necessary equipment to power their shoots, without the need to hire cameras and lights along with them. As with our media rental service, we provide various delivery options in our Eco-Friendly Electric Vehicle, as well as by courier and post. VMEDIA provide various onboard flight safe camera battery power options, as well as chargers and external power sources.

We also have scope to expand our product range, so if you have any suggestions on products you would like to see us providing, do not hesitate to drop us an email.

Whether you need a little extra power to keep your production going, or you're off on a two week trek through the Sahara. VMEDIA has you covered.
